

## SILVACLEAN OPERATING PROCEDURE

### 1. ACQUIRE SC4700 SILVACLEAN DOSING UNIT

The SC4700 is an industrial laundry dosing unit, meant to deliver SilvaClean chemistry through the final rinse of the laundry cycle to provide an added lasting antimicrobial effect on all laundered textiles and fabrics, including equipment and apparel.

### 2. APPLIED SILVER ENGINEERS INSTALL THE SC4700 UNIT ON SITE AND MAKE CONNECTIONS TO EXISTING WASHING MACHINES

Applied Silver personnel will come onsite and complete all required installation, including connections to incoming water supply, power supply, and to the desired washing machines.

### 3. PROGRAM THE WASHER WITH THE HELP OF APPLIED SILVER ENGINEERS TO INCLUDE A SIGNAL TO ENABLE AUTOMATIC DOSING INTO THE LAUNDRY CYCLE

Applied Silver Engineers will help program all washing machines intended for SilvaClean use. The SilvaClean technology can support a wide variety of washers, and can automatically support several washing machines at a time.

### 4. RECEIVE SILVACLEAN CARTRIDGES FROM APPLIED SILVER AND INSERT INTO THE SC4700

SilvaClean monitors the system remotely and SilvaClean cartridges are automatically shipped from Applied Silver anytime the current cartridge is running low. The empty cartridge is swapped out with the new, and the empty is then returned to Applied Silver via common carrier for disposal.

### 5. YOUR WASHING MACHINES ARE NOW CAPABLE OF TREATING TEXTILES WITH SILVACLEAN.

Once the SC4700 is installed, washing machines are programmed, and cartridges are filled, there are no additional steps required to treat textiles with SilvaClean. Your washing machines will automatically dose with SilvaClean when specific formulas are selected.

### 6. THE SILVACLEAN SERVICE INCLUDES CLOUD-BASED MONITORING OF ALL PERFORMANCE AND PROCESS CONTROL

This ensures all textiles are treated and that Applied Silver becomes immediately aware of any errors. The cloud-based service provides real time feedback on the process, and enables easy reporting of treatments to your organization.

### 7. APPLIED SILVER ENGINEERS PROVIDE ROUTINE FIELD SERVICE & SITE VISITS

Our field service engineers perform routine preventative maintenance, quickly address any technical issues, and provide continuous support to equipment managers.
